2024

CS110: Fundamentals of Computer Programming

Class: BESE-16D

Lab 01: Introduction to C Programming

CLO 4: Use the latest IDEs and other supplementary tools to aid implementation and code management

Date: 8th September, 2026

Time: 9am-12pm

Lab Engineer: Ms Shakeela

Task 1: *Creating a Project in Visual Studio (to compile and run programs)*

Statement:

In the following, let's create a solution called CS110Labs and a project called Lab00. When you want to work on your Lab01 next time, you can open the solution CS110Labs and add another project called Lab01.

Task 2: *Add some source code to this project*

Statement:

We have two options when we want to add source code to our project. First is to create new file (Add New Item) and the second is to use an existing item (Add Existing Item).

Additional Tasks:

Task #3: Reviewing the Visual Studio Environment

Statement:

Now let's try everything again from scratch! Write a program MyFirstProgram_v2 which outputs on notepad.

Task #4:

Statement:

If you modify a file with a deliberate error, you can see what sort of message this error generateswhen you try to recompile.
